Sheet 1 of 2

## TEST CODE SHEET

## 1. <u>TYPE OF TEST(S)</u>

High velocity test.

#### 2. WATER REGULATIONS REQUIREMENTS FOR FITTINGS

#### Schedule 2

15-(1) .... every water system shall contain an adequate device or devices for preventing backflow of fluid from any appliance, fitting or process from occurring.

## 3. <u>BRITISH STANDARDS OR WATER SPECIFICATION, DEEMED TO SATISFY WATER REGULATIONS</u> <u>REQUIREMENTS</u>

3.1 Fittings with 'kitemarks' which are deemed to satisfy the requirements of regulations are listed in the directory.

#### 4. <u>TEST PROCEDURE</u>

- <u>Note</u> Unless otherwise stated the temperature of the test fluid shall be  $20 \pm 10^{\circ}$ C.
- 4.1 Tests applicable to the following:-

## CHECK VALVES

DN6 to DN250. Devices for the prevention of contamination by backflow.

#### (A) <u>CHECK VALVES</u> (Derived from prEN 164167. Clause 7.1) DN6 to DN250.

TEST METHOD

**<u>APPARATUS</u>** The following apparatus is required.

A supply of water to achieve the test flow rates.

Flow meter.

Control valve.

Laboratory equipment must be designed to ensure that the valve can be tested to verify the requirement.

**<u>PROCEDURE</u>** The procedure shall be as follows:-

- (1) Mount the device in the test system in its normal working position.
- (2) Open the water supply control valve.
- (3) Adjust the control valve to increase the flow rate of the water passing through the valve until an average velocity of  $4 \pm 0.5$  m/s, or a flow rate as given in Table 1, is obtained.
- (4) Maintain this flow velocity for a period of 5 minutes  $\pm$  60 seconds.
